

LEVI AREA DEVELOPMENT MILESTONES

LEVI IS BUILT around the old village of Sirkka and local culture lives vividly in the area. The area has been developed strategically for a long time, which contributes to Levi being one of Finland's biggest travel destinations today. Development of the area has been defined by development plans Levi 1–4, and continued in Levi Future Work framework. The success has been sped up by environment and nature, accessibility, events as a tool for development, and collaboration and networks.

Preserving the vitality of the Arctic nature is crucial, as it creates the necessary conditions for success. This is achieved by committing to working together towards a common goal. Levi implements Visit Finland's Sustainable Travel Finland programme and many local companies have been awarded sustainability certificates or are striving for getting one. Goals can be achieved through action and when everyone makes small actions, put together they make a combination of great deeds – one action at a time.

Environmental certificates granted to businesses in the Levi area
